

PROGRESSIVE MONOBLOCK DISTRIBUTOR FROM ONE TO EIGHTEEN OUTPUTS

SMP is a progressive cylinder block distributor that is ideal for applications requiring small dimensions for small spaces. It is available in 6, 8, 10, 12, 14, 16 and 18 outputs, each with dosage of 0.2 cm³ per cycle.

The single output of the dosing device may be combined with the one located adjacent by eliminating the special fitting and applying a plug. Visual or electronic monitoring works by removing the plug and installing a complementary visual or electronic device.

The grease pumped inside of the block is distributed by the piston dispensers of the progressive dosing device equally among the different outputs. In case a single output becomes blocked, the pistons stop their activity allowing for the control of the entire system by means of a single device for this purpose.

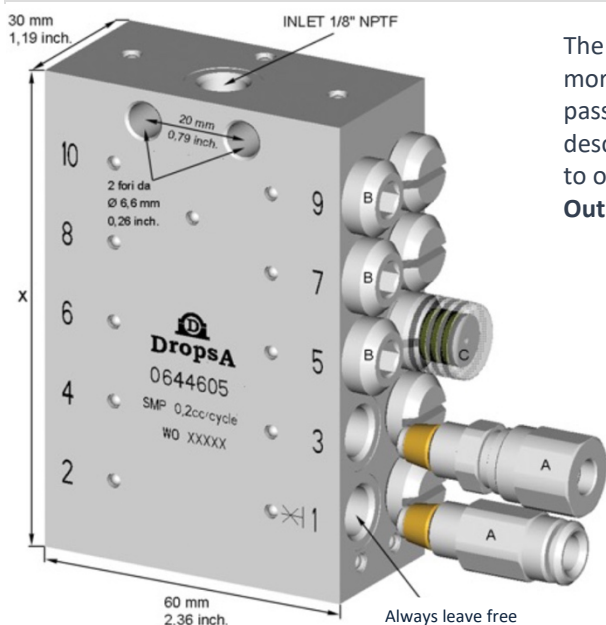

TECHNICAL INFORMATION

GENERAL TECHNICAL SPECIFICATIONS	
Min. pressure	20 bar, 300 psi
Max. pressure	300 bar, 4,400 psi
Max. cycles per min.	625 cycles
Operating temperature	-30 to 70°C, 22 to 158°F
Lubricant viscosity	Min: 32 cSt oil Max.: NLGI 2 grease
Material	Nickel-plated steel Stainless steel, AISI 304;
CYCLE SENSORS	
Material	Stainless steel, AISI 316 Nickel-plated brass
Proximity type	PNP or NPN 10-30V DC - 200 mA

SMP OUTPUT DIAGRAM

The flow rates of the adjacent outputs can be combined by plugging one or more outputs. In the example, by plugging output no. 8, the lubricant passes on to the adjacent output (in the example, the number 6) in a descending order. In case output no. 2 is plugged, the lubricant passes on to output no. 1.

Output no. 1 can never be plugged.
