OPERATION AND MAINTENANCE MANUAL

At Dropsa SpA, we are committed to both reducing our indirect environmental impact and to identifying the tools for managing the direct impacts responsibly, such as the optimisation and reduction of our energy consumption and, consequently, our CO² emissions, and the reduction of the consumption of water and paper.

In this respect, we have defined that starting from April 2021 the use of paper for our operation and maintenance manuals will be progressively reduced.

In compliance with the Machinery Directive 2006/42 / EC in the field of "manuals in support of products", our multilingual and current manuals are always available on our web site www.dropsa.com or by scanning the QR code printed on the product label.

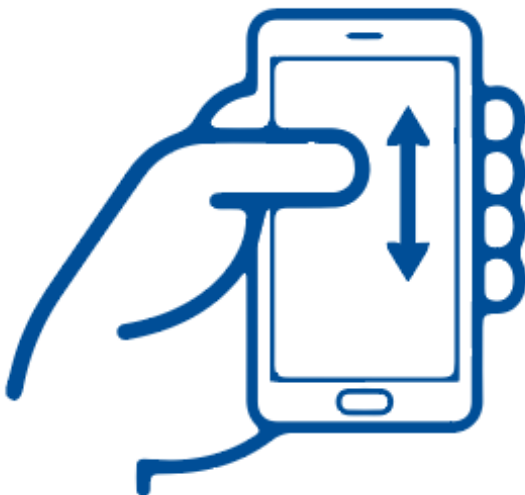

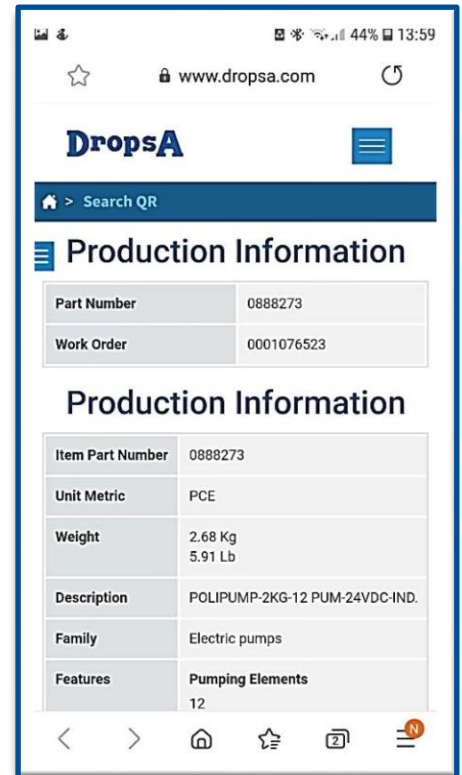

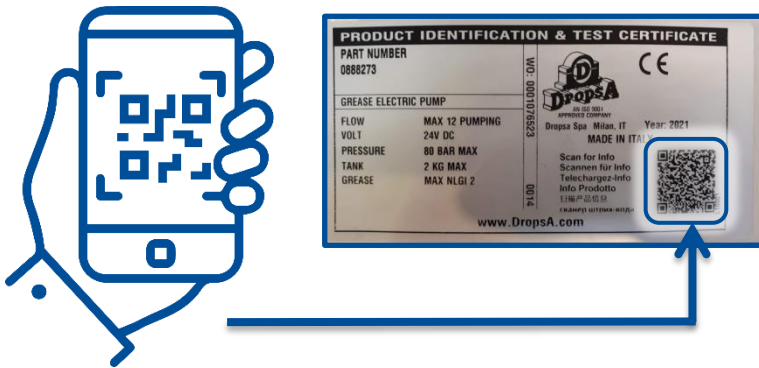

Enclosed are the instructions for download via QR code.

We are confident that this choice will help protect environment and allow us to provide a constant and immediate technical information service.

Best Regards

DropsA S.p.A.
