

PRESSURE INDICATOR

PRESSURE INDICATOR WITH ROD

Pressure indicators are used to check pressure in the main or secondary line.

Pressure indicator with **rod** and **spring**: the pressure acting on a small hardened, ground and polished piston that moves the rod.

They are available for pressure up to 250bar (3600psi).

PRESSURE INDICATOR WITH ROD

N-TYPE

In the spring loaded the pressure acts on a small hardened and ground piston which displaced the indicator rod when the set pressure is reached. The indicator returns when pressure returns to zero.

PRESSURE INDICATORE WITH MEMORY ROD

M-TYPE

This device is very useful for checking the secondary supply line. The indicator rod X moves out when an abnormal pressure rise occurs in the line where the indicator is fitted due to blockage of the lubricant to the bearing. A locking device prevents the return of the rod and indicates the fault to the operator. The indicator rod is released by lifting lever.
